

EASY FUSE FLOAT FIT GLASS

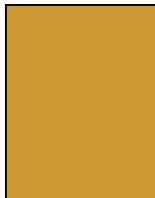

Float Glass Compatible Colours

We have often been asked for coloured glass which can be fused to clear float glass. It is now available in a fusible glass line which makes inexpensive float glass an integral base and/or top layer in your projects. Each sheet has been tested for accurate C.O.E.
Additional colours and accessory glass including frit, powder, and stringers will be added soon.

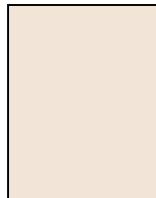

Colours shown are all cathedral transparent except for White and Black opals
