

The Kiln:

A SKUTT workhorse, built to last and backed with a 2-year parts & labor warranty. Top Opening: 15" (375mm), depth: 6.5" (162mm).

Plugs into standard 15 AMP household current.

The Controller:

The new *GlassMaster LT* Controller, developed especially for the *HotStart*[™] Kiln, is a "kid brother" to the legendary Skutt *GlassMaster*. This impressive unit is fully pre-programmed to successfully fire and anneal glass projects up to 10mm in finished thickness.

The size of your project determines which of three firing speed options you select: Fast, Medium or Slow. Next, identify the Process you wish: Slump, Tack Fuse or Full Fuse. If you wish, stop there and the kiln is Ready to fire. Or, adjust the Process time and temperature -- it's as simple as the push of a button.

The *GlassMaster LT* controller achieves fully automatic firing, and provides simple manual overrides for crafters who exercise precise control over their kilnforming.

The Accessory Kit: The HotStart comes complete with sturdy steel stand and porcelain peephole plug. The Accessory Kit includes a 13-inch round kilnshelf, three 1-inch posts, 8 ounces of shelf primer, and enough *ThinFire* shelf paper for three full-shelf firings.
