

Detects Lead on the skin and other surfaces...

Use the D-Lead® Lead Developer (Solution 1) in combination with the D-Lead Lead Indicator (Solution 2) and D-Lead® Cotton Test Pads to immediately and easily detect lead on skin, personal protective equipment, tools, instruments, work shoes, lunch tables and all other surfaces.

The D-Lead® Lead Test Kit has a low detection limit. Testing shows a detection level as low as 20 micrograms total Lead when the Lead Test Kit is used properly. This is a specific test for the presence of Lead and should not be considered quantitative.

***Instant results
for the presence of Lead
as low as 20 micrograms!***

Direct Test Method – to test lead on skin and other surfaces

Step 1: Spray the skin or surface 4-5 times with D-Lead® Developer (Solution 1)

Step 2: Spray the skin or surface 4-5 times with D-Lead® Lead Indicator (Solution 2)

If Lead is present on the skin or surface, a yellow colour will show immediately. The yellow colour shows the exact location of the Lead contamination.

Indirect Test Method – to test lead on skin and other surfaces

Step 1: Take out one D-Lead® Test Pad from the kit.

Step 2: Spray the entire D-Lead Test Pad 6-8 times with the D-Lead® Developer (Solution 1)

Step 3: Wipe the skin or surface that is being tested with the moist Test Pad

Step 4: Spray the entire D-Lead® Test Pad 5-7 times with D-Lead® Lead Indicator (Solution 2)

If Lead is present on the tested surface, a yellow colour will show immediately. The yellow colour indicates the presence of the Lead contamination.

Cleaning Lead contamination from skin or other surfaces

Use a D-Wipe® Towel or other D-Lead® cleaner to clean skin or tested surface.

D-Lead® cleaning products will remove all lead residue and other heavy metals.

D-Lead® Test Kit provides about 100 economical and effective tests that provide you with instant results to identify the presence of Lead.

D-Lead products are manufactured in USA for Esca Tech Inc.
